OBJECTIVES

- Learn how to find 10%
- Quickly calculate 5% using 10%
- Move decimals for 1% easily

GOALS

- Apply shortcuts in real life
- Improve overall math skills
- Save time on calculations

10% CALCULATION SHORTCUT

Move the decimal one place left.

This method is quick and easy.

It applies to any numerical value.

Use it to simplify percentage calculations.

SIMPLIFYING 5% CALCULATIONS

To find 5%, start with 10%.

Move the decimal one place left.

Divide the 10% result by 2.

For example, 5% of 320 is 16.

1% OF A NUMBER

Move decimal two places left

Example: 1% of 320 is 3.2

Quick and simple calculation method

5% OF A NUMBER

Find 10% easily

Then divide that number by 2

Example: 5% of 320
